The survey sampling, programming, and weighting were performed by, or under the supervision of, Laura Stephenson, Allison Harell, Peter Loewen and Daniel Rubenson. They are professors of political science at the University of Western Ontario, l'Université de Québec à Montréal, the University of Toronto and Ryerson University, respectively. Benjamin Allen Stevens, Joanie Bouchard, Laura French, and Katherine Sullivan assisted them in this task.

The 2019 Canadian Election Study was funded by grants provided by the Social Sciences and Humanities Research Council of Canada.

## 5. Sample design and survey weights

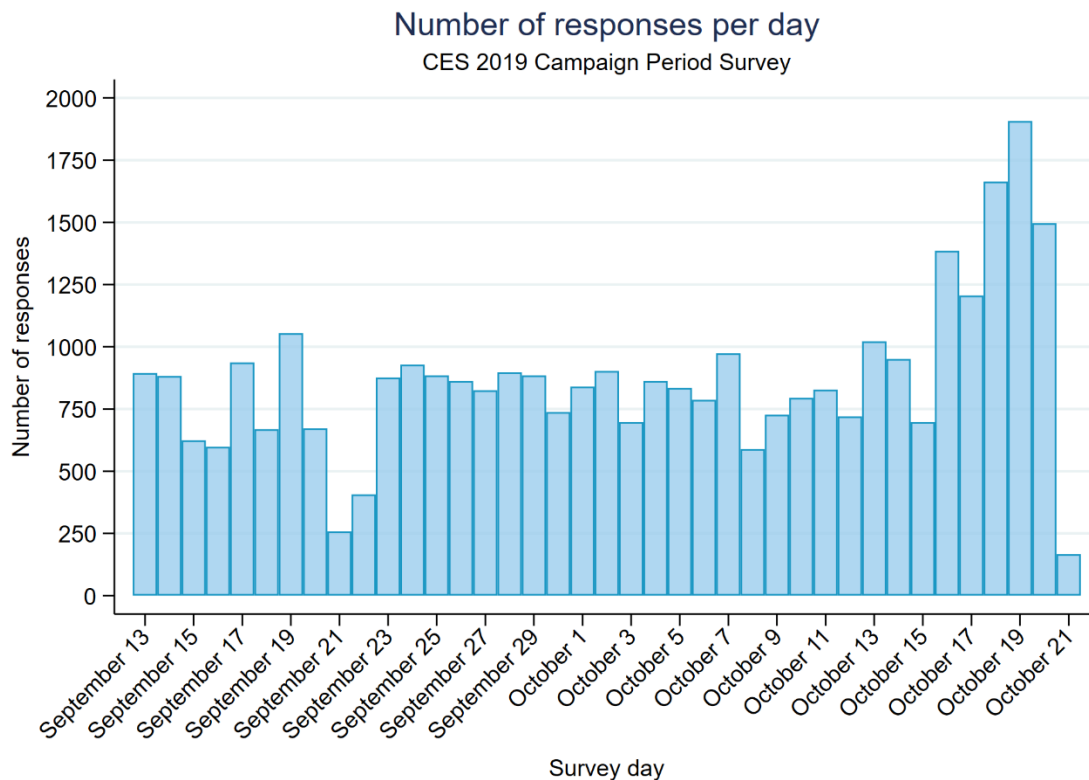

### 5.1 Sample design

The online sample for the 2019 Canadian Election Study was composed of a two-wave panel with a modified rolling-cross section during the campaign period and a post-election recontact wave.

#### 5.1.1 Campaign Period Survey (CPS)

We procured an online sample of 37,822 members of the Canadian general population through Qualtrics, with targets stratified by region and balanced on gender and age within each region. We aimed for 50% men and 50% women. We aimed to have 28% of our respondents aged 18-34, 33% aged 35-54 and 39% aged 55 and higher. The regions were: Atlantic (Newfoundland and Labrador, New Brunswick, Nova Scotia, Prince Edward Island), Quebec, Ontario Prairies (Manitoba, Saskatchewan, Alberta), and British Columbia. Within each of those regions, the provincial quotas were split evenly. We also aimed to have 80% French and 20% English within Quebec, 10% French within the Atlantic region, and 10% French nationally. Respondents needed to be aged 18 or over, and Canadian citizens or permanent residents in order to participate.

We initially aimed for a daily sample of 1000 respondents per day for the campaign period. This was not always achieved. We increased our targets during the last five days of the campaign, to try to increase the total number of respondents.

Sampling for the Campaign Period Survey occurred from September 13<sup>th</sup> to October 21<sup>st</sup> <sup>1</sup>, 2019. The survey instrument was presented on the Qualtrics online platform.

### 5.1.2 Post-Election Survey (PES)

10,340 respondents from the Campaign Period Survey were re-contacted after the election for a follow-up survey.<sup>2</sup> Sampling for the Post-Election Survey occurred from October 24<sup>th</sup> to November 11<sup>th</sup>, 2019. The survey instrument was presented on the Qualtrics online platform.

## 5.2 Panels

Qualtrics drew from a number of panels to construct the sample for the Campaign Period Survey. These panels were only identified to us by the embedded data field that contained the respondent's panel ID. A breakdown of the number of respondents from each panel in the cleaned data is listed below.

<sup>1</sup> The survey was closed at 9:00am on October 21<sup>st</sup>.

<sup>2</sup> We had aimed for 50% return to sample, but Qualtrics was unable to meet that target.

The metadata variables `cps19_panel` and `pes19_panel` show which panel respondents were part of.

### 5.3 Survey weights

Weights have been created for the dataset using an iterative "raking" process, as provided by the *ipfraking* command in STATA15. Marginal values were successively weighted according to province, as well as gender, age group, and education level. All population data were taken from the 2016 Canadian census. A maximum of 200 iterations were completed. The dataset includes the weights produced as 4 variables, depending on which portion of the sample is being used:

1. **cps19\_weight\_general\_all** - all campaign period respondents
2. **cps19\_weight\_general\_restricted** - only high-quality campaign period respondents (see Data Quality section below)
3. **pes19\_weight\_general\_all** - all post-election survey respondents
4. **pes19\_weight\_general\_restricted** - only high-quality post-election survey respondents

Note that respondents from the territories do not have weights, as they were not included in the sampling frame, because data collection in the territories is too sparse to be representative.

## 6. Data Quality

Incomplete responses, duplicate responses of previous respondents, speeders, those who "straight-lined" grid questions ("straightliners"), and respondents whose postal code didn't match their province have all been removed from the data file, and are excluded from numbers reported in this codebook.

A small portion of the remaining respondents have been flagged by less-severe data quality checks, but as these responses may still be useful they have been kept in the data. These were “inattentive” respondents, who took more than 60 minutes to complete the survey, and “initial duplicate” respondents, which means they took the survey again later, but that this was their initial response. These respondents are identified by the variables `cps19_inattentive`, `cps19_duplicates_flag`, `pes19_inattentive`, and `pes19_duplicates_flag`.

If these respondents are excluded, 33,905 Campaign Period Survey and 9544 Post-Election Survey responses remain.

## 6.1 Campaign Period Survey

### 6.1.1 Removal criteria

During the data cleaning process, respondents were categorized based on their most important reason for removal. While respondents might be removed for multiple reasons, the most important reason is most relevant.

Reasons for removal, in order of importance:

1. Internal survey testing or previews
2. Ineligible - did not consent to survey
3. Ineligible - not a Canadian citizen or permanent resident
4. Ineligible - respondent under 18 years of age
5. Over quota
6. Incomplete - did not complete initial quota demographics
7. Incomplete - did not complete core survey
8. Duplicate of a previous respondent (identified by IP address and the following demographics: year of birth, gender, education level, employment, religion, immigration status)
9. Speeder (completed the survey in less than 500 seconds, or 8.3 minutes)
10. Postal code-province mismatch
11. Straightliner

The following values are in the final dataset

12. Inattentive
13. Initial duplicate (identified by IP address and demographics, took survey again later)
14. Completed the core survey, but not the modules
0. Clean complete

## 6.1.2 Identification of duplicates

Duplicate responses to the survey (that is, the same respondent taking a survey multiple times) were identified using the following values. A response was flagged as a duplicate if they had the same values as another response to the survey for *each* of the following demographics responses, *or* had the same panel ID.

Values used to identify duplicate responses in the Campaign Period Survey

| Value                   | Variable name       |
|-------------------------|---------------------|
| IP address <sup>3</sup> | -                   |
| Year of birth           | cps19_yob           |
| Gender                  | cps19_gender        |
| Education               | cps19_education     |

Of the responses flagged as duplicates, the first response was kept in the dataset (and flagged with the variable `cps19_duplicates_flag`, as they are still useful, while subsequent responses were removed.

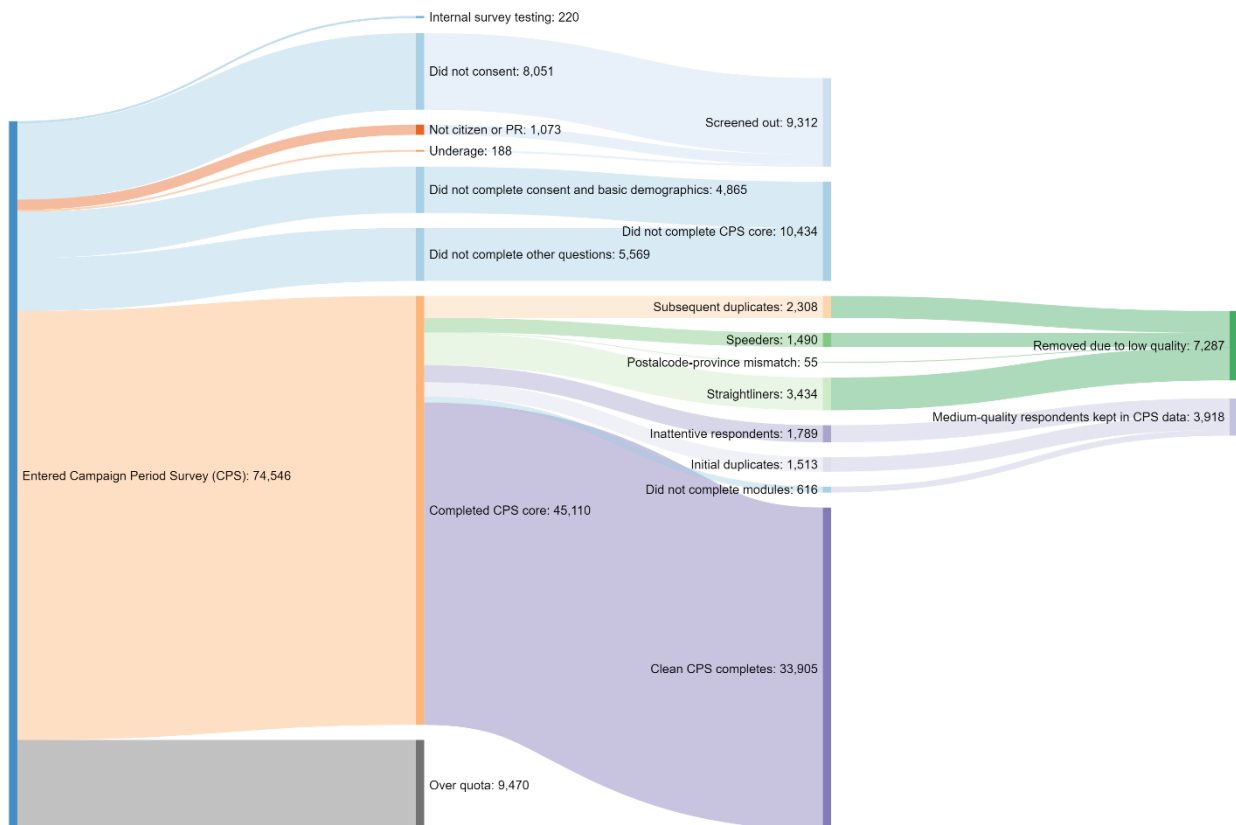

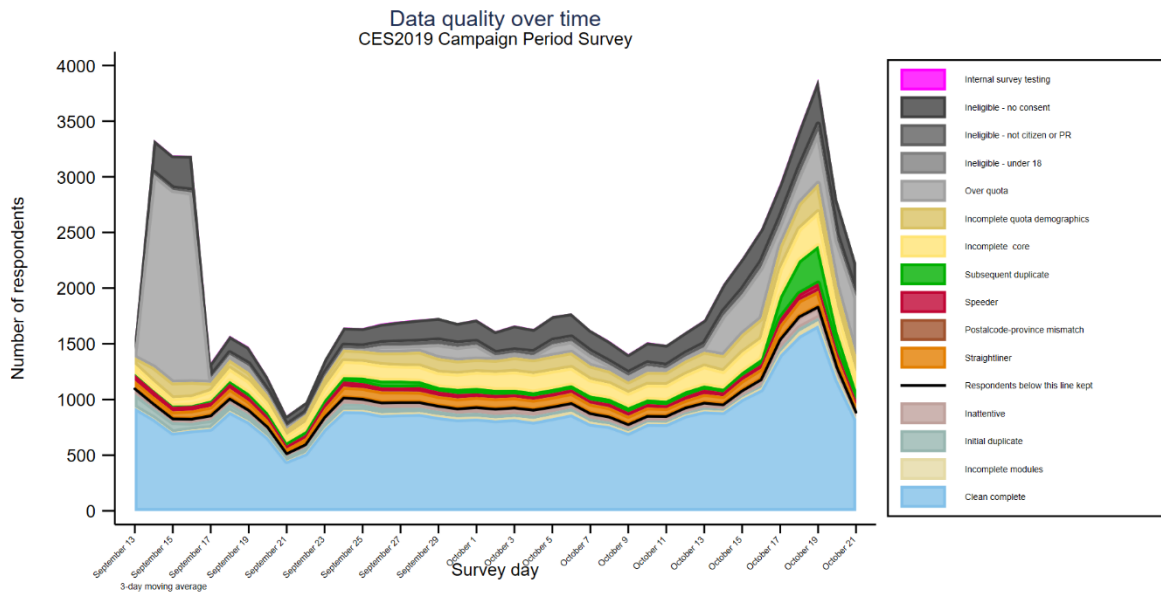

## 6.1.3 Table of data quality

Once the cleaning was complete, we ended up with 37,822 responses, of which 33,905 were high quality and 3,917 were slightly lower quality.

## 6.2 Post-Election Survey

### 6.2.1 Matching Respondents to Campaign Period Survey

We matched Post Election Survey responses to their Campaign Period Survey responses by using respondent's panel IDs. We were unable to match some respondents using these variables (which are not included in this dataset, as they might be personally identifiable). Qualtrics was able to match most of the remaining respondents through other means, and those matches have been incorporated.

We were able to use some limited demographic information to match some additional respondents (IP address, year of birth, and province), but because few demographic variables were repeated across the CPS and PES, those matches were not kept in the data.

### 6.2.2 Removal criteria

The Post-Election Survey data cleaning followed the Campaign Period Survey, with the following changes:

1. There were no quotas for the PES, so that category doesn't exist
2. Qualtrics set the termination exit links to not save screened-out responses, so we can't know how many respondents did not consent, or were otherwise ineligible for the CES PES
3. We did not receive matching information for respondents who did not complete the PES, so any respondents who completed most of the survey, but not all of it, were caught up in the "could not match" category.

This results in the following categories:

Removed from dataset:

1. Internal survey testing
2. Ineligible - under 18
3. Incomplete quota demographics
4. Incomplete core
5. Subsequent duplicate
6. Speeder
7. Postal code-province mismatch
8. Straightliner
9. Could not match to CPS response
10. Key demographics did not match CPS
11. Matched using IP address, year of birth, and province

The following values are in the final dataset:

- 12. Inattentive
- 13. Initial duplicate
- 14. Incomplete modules
- 15. Only matched by Qualtrics, not using panel IDs
- 0. Clean complete

### 6.2.3 Identification of duplicates

Duplicate responses to the survey (that is, the same respondent taking a survey multiple times) were identified using the following values. A response was flagged as a duplicate if they had the same values as another response to the survey for *each* of the following demographics responses, *or* had the same panel ID.

Due to the limited demographic variables available in the Post-Election Survey, the variables used here were different than those used for the Campaign Period Survey.

Values used to identify duplicate responses in the Post Election Survey

| Value                   | Variable name        |
|-------------------------|----------------------|
| IP address <sup>4</sup> | -                    |
| Province                | pes19_province       |
| Citizenship status      | pes19_citizen        |
| Age                     | pes19_age            |
| Month of birth          | pes19_month_of_birth |

Of the responses flagged as duplicates, the first response was kept in the dataset (and flagged with the variable `pes19_duplicates_flag`) as they are still useful, while subsequent responses were removed.

### 6.2.4 Table of data quality

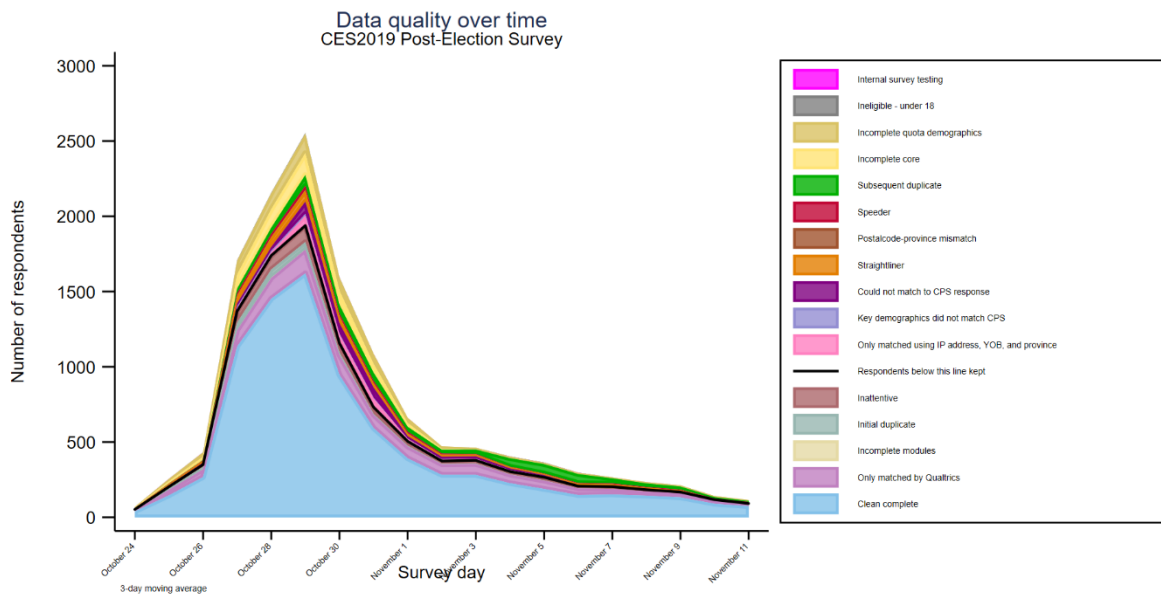

Once all of the cleaning has been done, we end up with 10,340 responses, of which 8,313 were high quality and 2,027 were medium-quality.

## 7. Survey design

### 7.1 Required responses

One of the design requirements for the 2019 CES questionnaires was that respondents had to be able to refuse to answer any given question (except for those used by the survey quotas or to identify the respondent's riding, such as province of residence). In order to comply with that requirement while still retaining high data quality, the questionnaires made extensive use of "Don't know/ Prefer not to answer" options, where possible, and required respondents to respond in some way (even if only to select "Don't know/ Prefer not to answer"), except where otherwise noted (this was primarily non-categorical questions such as sliders). For example, some questions had the text "If you do not know, or prefer not to answer, please click →" at the end of them. For those questions, if the respondent did not respond to that question or a component of that question (for example, did not click on or move a slider), then their response to that question, or that component of the question, was recorded as missing.

### 7.2 Auto-advance

Auto-advance was used throughout the survey, using the survey-wide options of the Qualtrics platform. As the survey used one question per page where possible, this meant that once respondents had finished answering each question, they would be automatically moved to the next page. Auto-advance did not apply to open-text questions, multiple-selection questions, slider questions, or single-response questions when an item with a supplemental text field was selected.<sup>5</sup>

The “back” button, represented by “←”, was available for respondents to go back to a previous question if they wished to change their answer. However, due to platform constraints, it is not possible to go back to a previous block. Due to the complex design of the survey, many small blocks of questions were used, making this a common restriction.

### 7.3 Variable naming

We have used descriptive names for variables, where possible, within character limits.

To help differentiate variables from the different waves of the 2019 CES, and to differentiate between variables from different years should one combine this dataset with others, we use the “cps19\_” prefix for questions in the Campaign Period Survey, and the “pes19\_” prefix for variables in the Post-Election Survey, where possible.

Metadata variables do not usually use these prefixes, except in cases where the same variable was used in both the Campaign Period Survey and the Post-Election Survey.

### 7.4 Additional question modules

The CES2019 Campaign Period Survey, and to a lesser extent the Post-Election Survey, included a number of additional question modules, which some respondents received. These question modules were placed after the main survey, after the “additional demographics” block of questions.

Respondents were allocated to up to a certain number of minutes of modules. This number was fine-tuned over the course of the campaign period, to balance the resulting overall length of the survey and the number of respondents required to answer the question modules. Some question modules that included experiments on specific topics were exclusive of other modules on similar topics. Some modules had specific sampling requirements.

The question modules were displayed in a randomized order (except for a few which had a part 1 and part 2 that required some spacing between them).

<sup>5</sup> More information is available on Qualtrics’ website, under the “Autoadvance” heading: <https://www.qualtrics.com/support/survey-platform/survey-module/look-feel/fonts-and-colors/#Autoadvance>

These question modules are not included in the dataset nor discussed further in the codebook. These modules may be released by individual researchers and can be merged with this data by matching on `cps19_ResponseID`.

## 8. Campaign Period Survey

### 8.1 Metadata

**cps19\_StartDate**

Start timestamp for the Campaign Period Survey response, in Stata time format

**cps19\_EndDate**

End timestamp for the Campaign Period Survey response, in Stata time format

**cps19\_Responseld**

Unique identification code of the Campaign Period Survey response. Mainly useful for data management, such as combining different versions of the dataset.

**cps19\_current\_date**

Date the Campaign Period Survey response started, in YYYYMMDD format, as a number.  
*For example, “20191020” would be October 20, 2019.*

**cps19\_current\_date\_string**

Date the Campaign Period Survey response started, in YYYYMMDD format, as a string.  
*For example, “20191020” would be October 20, 2019.*

**cps19\_Q\_Language**

Language the respondent answered the Campaign Period Survey in. “EN” is English, “FR-CA” is French.

**cps19\_Q\_TotalDuration**

How long the respondent spent in the Campaign Period Survey, in seconds. This includes all time from when the survey is opened, to when the response is submitted, including time spent away from the survey, and if the respondent closes the survey and returns to it later.

**get\_news**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `cps19_news_cons`. 1 = respondent received `cps19_news_cons`, 0 = they did not.

**get\_more\_naming**

Randomized embedded data field containing a flag indicating whether the respondent would receive the questions `cps19_govgen_name` and `cps19_presrus_name`. 1 = respondent received `cps19_govgen_name` and `cps19_presrus_name`, 0 = they did not.

**get\_not\_vote\_for**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `cps19_not_vote_for` if they were otherwise eligible for it. 1 = respondent received `cps19_not_vote_for` if they were otherwise eligible for it, 0 = they did not.

### **get\_party\_issue\_handling**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `cps19_issue_handle`. 1 = respondent received `cps19_issue_handle`, 0 = they did not.

### **get\_imp\_loc\_iss**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `cps19_imp_loc_iss`. 1 = respondent received `cps19_imp_loc_iss`, 0 = they did not.

### **get\_outcome**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `cps19_outcome_most` and `cps19_outcome_least`. 1 = respondent received `cps19_outcome_most` and `cps19_outcome_least`, 0 = they did not.

### **justice\_law**

#### **justice\_law\_fr**

These embedded data fields were used in a wording experiment, in which **justice\_law** (which was piped into `{e://Field/justice_law}`) was randomly set to be either “crime and justice” in English (“la criminalité et la justice” in French) or “police and law enforcement” (“la police et les forces de l’ordre” in French) for the question `cps19_spend_just_law`.

### **lr\_scale\_order**

Respondents were randomly assigned to receive either `cps19_lr_scale_bef` or `cps19_lr_scale_aft`, as part of an experiment on ordering effects. If the embedded data field `lr_scale_order` was equal to “individual\_first”, they received the individual self-placement question `cps19_lr_scale_bef`, and then the party placement question `cps19_lr_parties`. If the embedded data field `lr_scale_order` was equal to “party\_first”, they received the party placement question `cps19_lr_parties`, and then the individual self-placement question `cps19_lr_scale_aft`.

**ethnicity\_intro**  
**ethnicity\_intro\_fr**

The introductory text to `cps19_ethnicity` varied based on whether the respondent was a Canadian citizen or permanent resident. For citizens, `{e://Field/ethnicity_intro}` read “In addition to being Canadian, to what ethnic or cultural group(s) do you belong?”, and for permanent residents it read “To what ethnic or cultural group(s) do you belong?”. In the French translation, `{e://Field/ethnicity_intro_fr}` contained equivalent text, “En plus d’être Canadien, à quel groupe ethnique ou culturel appartenez-vous?” or “À quel groupe ethnique ou culturel appartenez-vous?”.

**premier**  
**province\_fr**

These embedded data fields contained province-specific text, used in the question `cps19_prov_gov_sat`, which required different French grammar for some provinces.

### **cps19\_data\_quality**

This embedded data field contains the most important data quality category that the respondent is in, and was used during data review and cleaning. See section 6.1.1 for more details.

### **cps19\_panel**

Which panel the respondent was drawn from, measured during the Campaign Period Survey.

### **cps19\_age**

Respondent age in years, recoded based on their year of birth, cps19\_yob.

### **cps19\_duplicates\_flag**

Indicator for respondents that took the Campaign Period Survey multiple times. 0 = Unique, 1 = Initial response of someone who took the survey again. Any subsequent responses have already been removed from the data.

### **cps19\_inattentive**

Indicator that respondent took more than 60 minutes to complete the Campaign Period Survey. 1 = Inattentive.

### **constituencynumber**

Number of the federal electoral district (constituency) the respondent resides in, determined using their postal code and the Postal Code Conversion File Plus (PCCF+) available through Statistics Canada. The constituencies of 1.5% of respondents could not be determined from the postal code that they entered.

### **constituencyname**

Name of the federal electoral district (constituency) the respondent resides in, determined using their postal code and the Postal Code Conversion File Plus (PCCF+) available through Statistics Canada. The constituencies of 1.5% of respondents could not be determined from the postal code that they entered.

### **cps19\_fsa**

The first three digits of the respondent's postal code from the Campaign Period Survey, also known as their Forward Sortation Area. This can be provided upon request for research purposes..

**cps19\_weight\_general\_all**

Sample weight for all Campaign Period Survey respondents. See section 5.3 for more details.

**cps19\_weight\_general\_restricted**

Sample weight for Campaign Period Survey respondents, excluding subsequent duplicates and inattentive respondents. See section 5.3 for more details.

<sup>6</sup> This separate page was implemented as a separate survey in the Qualtrics platform, so that it could open in a new window, and not have the respondent lose their place in the current survey session. Here's how to set it up:

1. Create a separate survey for the additional information page, format and publish it
2. Add a hyperlink to the main consent page, that goes to the live survey link for the additional page. Make sure to set the link to open in a new window (it's under the "edit link" options when you right-click on the link), so that they don't lose their spot in the survey.

The purpose of this screen is to provide you with information about the research study you are being invited to participate in. You must be 18 years of age or older and a legal resident of Canada to be eligible to participate.

The purpose of the study is to obtain information about your views regarding current events, elections and democracy in Canada. Your participation in this study is voluntary. You may decide not to be in this study. Even if you consent to participate you have the right to not answer individual questions or to withdraw from the study at any time. If you choose not to participate or to leave the study at any time it will have no effect on you. If you decide to withdraw from the study, you may do so at any time by exiting the survey window. Due to the anonymous nature of your data, once your survey responses have been submitted, the researchers will be unable to withdraw your data.

Your survey responses will be collected anonymously through a secure online survey platform called Qualtrics. Qualtrics uses encryption technology and restricted access authorizations to protect all data collected. In addition, Western's Qualtrics server is in Ireland, where privacy standards are maintained under the EU-US Privacy Shield. The data will then be exported from

The survey you are being asked to complete today will take about 20 minutes to complete. Should you complete today's survey, you may be re-contacted and asked to participate in additional surveys as well. Participation today does not commit you to complete any additional surveys.

The benefit of participating in our study is that your responses will help us to know more about democracy in Canada. You may not benefit personally from your participation. There are no known risks or discomforts associated with participating in this study.

We do not offer any compensation for your participation today, however if you are eligible to participate and submit the survey then you may be eligible for compensation from Qualtrics, as determined by their current policies.

Your confidentiality will be maintained at all times. Representatives of Western University's Non-Medical Research Ethics Board may require access to your study-related records to monitor the conduct of the research. The data will be stored on a secure server at Western University and will be retained for a minimum of 7 years. Your data may be archived and retained indefinitely and could be used for future research purposes (e.g., to answer a new research question). By consenting to participate in this study, you are agreeing that your data can be used beyond the purposes of this present study by either the current or other researchers.

All identifiable information will be deleted from the dataset collected so that individual participants' anonymity will be protected. The de-identified data will be accessible by the study investigators as well as the broader scientific community. More specifically, the data will be made publicly available so that data may be inspected and analyzed by others. The data that will be shared in the dataset will not contain any information that can identify you.

You do not waive any legal right by participating in this study.

If you have questions at any time about the study or its results, you may contact:

L'objectif de cette page est de vous fournir de l'information concernant l'étude pour laquelle vous êtes invité à participer. Pour être éligible à participer, vous devez avoir 18 ans ou plus et être un résident avec un statut juridique au Canada.

Le but de cette étude est de mieux connaître votre opinion sur l'actualité, les élections et la démocratie au Canada. Votre participation à cette étude est volontaire, donc vous pouvez décider de ne pas y participer. Même si vous décidez de participer, vous avez le droit de ne pas répondre à certaines questions ou de vous retirer de l'étude en tous temps. Si vous ne participez pas ou décidez de vous retirer de l'étude, cette décision n'aura aucune conséquence sur vous. Si vous décidez de vous retirer de l'étude, vous pouvez le faire en tout temps simplement en fermant la page du questionnaire. En raison de la nature anonyme de vos données, une fois que vos réponses au sondage auront été soumises, les chercheurs ne pourront pas retirer vos données.

Vos réponses seront recueillies de manière anonyme via une plateforme d'enquête en ligne sécurisée. Cette plateforme, nommée Qualtrics, utilise des mesures d'encryptage et des accès restreints par autorisation pour protéger les données. De plus, le serveur Western de Qualtrics se trouve en Irlande, où les standards de protection de la vie privée sont établis sous le bouclier UE-États-Unis (EU-US Privacy Shield). Les données seront ensuite exportées de Qualtrics et stockées de manière sécurisée sur le serveur de Western University.

Le sondage que vous êtes invité à compléter aujourd'hui prendra environ 20 minutes. Si vous le complétez, il est possible que vous soyez recontacté à une date ultérieure et invité à remplir

d'autres sondages. Votre participation à ces sondages sera également volontaire.

L'avantage de participer à cette étude est que vos réponses nous aideront à mieux comprendre la démocratie au Canada. Vous ne bénéficierez pas directement de votre participation. Il n'y a pas de risques ou d'inconforts liés à votre participation à cette étude.

Nous n'offrons aucune compensation pour votre participation aujourd'hui. Cependant, si vous êtes éligible à participer et à soumettre le sondage, vous pourriez être éligible à une indemnisation de la part de Qualtrics, tel que déterminé par leurs politiques en vigueur.

Votre confidentialité sera maintenue en tout temps. Les représentants du comité d'éthique de la recherche non médicale de Western University peuvent avoir besoin d'accéder à vos dossiers en lien avec l'étude afin de suivre la conduite de la recherche. Les données seront stockées sur un serveur sécurisé de Western University et seront conservées pendant au moins 7 ans. Vos données peuvent être archivées et conservées indéfiniment et peuvent être utilisées à des fins de recherche future (par exemple, pour répondre à une nouvelle question de recherche). En consentant à participer à cette étude, vous acceptez que vos données puissent être utilisées au-delà des objectifs de la présente étude par le chercheur actuel ou par d'autres chercheurs.

Toutes les informations pouvant vous identifier seront supprimées de l'ensemble des données collectées afin que l'anonymat des participants soit protégé. Les données anonymisées seront accessibles aux chercheurs de l'étude ainsi qu'à la communauté scientifique. De manière plus spécifique, les données seront rendues publiques afin qu'elles puissent être examinées et analysées par d'autres. Les données qui seront partagées dans le jeu de données ne contiendront aucune information permettant de vous identifier.

Vous ne renoncez à aucun droit légal en participant à cette étude.

Si vous avez des questions portant sur l'étude ou ses résultats, vous pouvez contacter en tout temps:

Dr. Laura Stephenson  
Département de science politique  
University of Western Ontario  
London, Ontario, Canada  
1-519-661-2111 ext. 85164

Si vous avez des questions sur vos droits en tant que participant à la recherche ou sur la conduite de cette étude, vous pouvez contacter le Bureau de l'éthique de la recherche humaine au (519) 661-3036, 1-844-720-9816, ou par courriel: [ethics@uwo.ca](mailto:ethics@uwo.ca). Ce bureau supervise la conduite éthique d'études en recherche et ne fait pas partie de l'équipe de recherche. Tout ce dont vous discutez restera confidentiel.

En répondant au questionnaire, vous indiquez votre consentement à participer à l'étude.

Si vous souhaitez participer à cette phase de l'étude, veuillez fermer cette fenêtre et indiquer votre consentement à débiter l'enquête.

NOTE: cps19\_not\_vote\_for was set to receive a split sample of 50% (1/2), to make room in the survey for more questions. Whether a respondent was assigned to receive cps19\_not\_vote\_for was randomly determined in the Survey Flow by setting the embedded data field get\_not\_vote\_for to either 0 or 1. If get\_not\_vote\_for was equal to 1, they were assigned to receive cps19\_not\_vote\_for. get\_not\_vote\_for can be used to filter the dataset to only respondents that were assigned to receive cps19\_not\_vote\_for.

Unlike some of the other split sample questions, cps19\_not\_vote\_for had additional requirements - the respondent had to have indicated that they might vote in the upcoming election.

NOTE: The introductory text to cps19\_ethnicity varied based on whether the respondent was a Canadian citizen or permanent resident. For citizens, `${e://Field/ethnicity_intro}` read "In addition to being Canadian, to what ethnic or cultural group(s) do you belong?", and for permanent residents it read "To what ethnic or cultural group(s) do you belong?". In the French translation, `${e://Field/ethnicity_intro_fr}` contained equivalent text.

## 9. Post Election Survey

### 9.1 Metadata

**pes19\_StartDate**

Start timestamp for the Post Election Survey response, in Stata time format

**pes19\_EndDate**

End timestamp for the Campaign Period Survey response, in Stata time format

**pes19\_Responseld**

Unique identification code of the Post Election Survey response. Mainly useful for data management, such as combining different versions of the dataset.

**pes19\_current\_date**

Date the Post Election Survey response started, in YYYYMMDD format, as a number.  
*For example, “20191020” would be October 20, 2019.*

**pes19\_current\_date\_string**

Date the Post Election Survey response started, in YYYYMMDD format, as a string.  
*For example, “20191020” would be October 20, 2019.*

**pes19\_Q\_Language**

Language the respondent answered the Post Election Survey in. “EN” is English, “FR-CA” is French.

**pes19\_Q\_TotalDuration**

How long the respondent spent in the Post Election Survey, in seconds. This includes all time from when the survey is opened, to when the response is submitted, including time spent away from the survey, and if the respondent closes the survey and returns to it later.

**pes19\_fsa**

The first three digits of the respondent’s postal code from the Post Election Survey, also known as their Forward Sortation Area. This is provided instead of respondents’ full postal code to protect their privacy.

**notvote\_split**

An embedded data field used to record the assigned treatment for a question type experiment. notvote\_split was randomly set to either “categorical” or “textbox”. If notvote\_split was “categorical” (and the respondent did not vote), the respondent received the question pes19\_notvotereason1, which was a categorical question listing potential reasons why they did not vote, and asking them to select the main reason. If notvote\_split was “textbox” (and the

respondent did not vote), the respondent received the question pes19\_notvotereason2, which provided a text box for the respondent to write in the main reason why they did not vote.

### **splitsample**

This embedded data determined which of two large sets of questions the respondent would receive, either “CSES” for a set of questions related to the Comparative Study of Electoral Systems (CSES), or “modules”, for a second set of attitudinal questions largely focused on respondents' experience with the electoral process. The two sets of questions were designed to take roughly the same amount of time for respondents to complete. The lists below show which questions the respondent received if they were in each category, assuming they met all other criteria for those questions.

Randomized embedded data field containing a flag indicating whether the respondent would receive the question pes19\_taxes. 1 = respondent received pes19\_taxes, 0 = they did not.

#### **split\_senate**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question pes19\_senate. 1 = respondent received pes19\_senate, 0 = they did not.

#### **split\_trade**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question pes19\_trade. 1 = respondent received pes19\_trade, 0 = they did not.

#### **split\_lifesat**

Randomized embedded data field containing a flag indicating whether the respondent would receive the questions pes19\_happy and pes19\_satisfied. 1 = respondent received pes19\_happy and pes19\_satisfied, 0 = they did not.

#### **split\_responsibility**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question pes19\_cognition. 1 = respondent received pes19\_cognition, 0 = they did not.

#### **split\_sexism**

Randomized embedded data field containing a flag indicating whether the respondent would receive the questions on sexism: `pes19_hostile1`, `pes19_hostile2`, `pes19_hostile3`, `pes19_benevolent1`, `pes19_benevolent2`, and `pes19_benevolent3`. 1 = respondent received the questions on sexism, 0 = they did not.

#### **split\_abortion**

Randomized embedded data field containing a flag indicating whether the respondent would receive ONE of the questions on abortion: `pes19_abort1`, `pes19_abort2`, `pes19_abort3`, `pes19_abort4`, `pes19_abort5`, or `pes19_abort6`. 1 = respondent received one of the questions on abortion, 0 = they did not.

#### **split\_getahead**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_blame` and `pes19_stdofliving`. 1 = respondent received `pes19_blame` and `pes19_stdofliving`, 0 = they did not.

#### **split\_att\_div**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_fitin` and `pes19_immigjobs`. 1 = respondent received `pes19_fitin` and `pes19_immigjobs`, 0 = they did not.

#### **split\_govt\_eff**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_govteff` and `pes19_govtprograms`. 1 = respondent received `QNAME`, 0 = they did not.

#### **split\_medical**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_paymed`. 1 = respondent received `pes19_paymed`, 0 = they did not.

#### **split\_ties**

Randomized embedded data field containing a flag indicating whether the respondent would receive the questions `pes19_tieus`, `pes19_tiechina`, and `pes19_country`. 1 = respondent received `pes19_tieus`, `pes19_tiechina`, and `pes19_country`, 0 = they did not.

#### **split\_health\_followups**

Randomized embedded data field containing a flag indicating whether the respondent would receive the follow-up health questions `pes19_phealth` and `pes19_mhealth`. 1 = respondent received `pes19_phealth` and `pes19_mhealth`, 0 = they did not.

**split\_gender\_id**

Randomized embedded data field containing a flag indicating whether the respondent would receive the questions `pes19_feminine` and `pes19_masculine`. 1 = respondent received `pes19_feminine` and `pes19_masculine`, 0 = they did not.

**split\_big5**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_big5`. 1 = respondent received `pes19_big5`, 0 = they did not.

**split\_hatespeech**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_hatespeech`. 1 = respondent received `pes19_hatespeech`, 0 = they did not.

**split\_vol\_assoc**

Randomized embedded data field containing a flag indicating whether the respondent would receive the question `pes19_volassoc`. 1 = respondent received `pes19_volassoc`, 0 = they did not.

**PES19\_data\_quality**

This embedded data field contains the most important data quality category that the respondent is in, and was used during data review and cleaning. See section 6.2.2 for more details.

**pes19\_panel**

Which panel the respondent was drawn from, measured during the Post Election Survey.

**pes19\_age**

Respondent age in years recoded based on their year of birth, `pes19_yob`.

**pes19\_duplicates\_flag**

Indicator for respondents that took the Post Election Survey multiple times. 0 = Unique, 1 = Initial response of someone who took the survey again. Any subsequent responses have already been removed from the data.

**pes19\_inattentive**

Indicator that respondent took more than 60 minutes to complete the Post Election Survey. 1 = Inattentive.

**pes19\_weight\_general\_all**

Sample weight for all Post Election Survey respondents. See section 5.3 for more details.

**pes19\_weight\_general\_restricted**

Sample weight for Post Election Survey respondents, excluding subsequent duplicates and inattentive respondents. See section 5.3 for more details.

Thank you for considering taking our survey. You can complete the survey in English or in French. Please choose your preferred language using the drop-down menu at the top right of this screen (vous pouvez choisir de compléter ce sondage en français ou en anglais en sélectionnant la langue de votre choix à l'aide du menu déroulant situé dans le coin supérieur droit de l'écran).

Today we are doing another part of a research project on Canadians' attitudes about current events, elections and democracy, and we would like your opinions. You are being invited to participate because you completed a survey for our project previously. Participation in this part of the research is completely voluntary. Today's survey will take about 20 minutes to complete. Your answers will be kept completely confidential and will be used for research purposes only.

To read additional information and details about this study, including your rights as a research participant, how you will be compensated for your time and how your data will be stored, please click [HERE](#). If you would like to complete the survey, please click the appropriate link below.

If you have questions at any time about the study or its results, you may contact:

## Letter of Information and Consent – Additional Information

<sup>7</sup> This separate page was implemented as a separate survey in the Qualtrics platform, so that it could open in a new window, and not have the respondent lose their place in the current survey session. Here's how to set it up:

1. Create a separate survey for the additional information page, format and publish it
2. Add a hyperlink to the main consent page, that goes to the live survey link for the additional page. Make sure to set the link to open in a new window (it's under the "edit link" options when you right-click on the link), so that they don't lose their spot in the survey.
3. If you want to have the link go to the same language as the source page, you have to add "?Q\_Language=EN" or "?Q\_Language=FR" (or whatever Qualtrics language codes are relevant).

JavaScript was added to remove the "next" button on the additional info page, so that they could only view the page, not "complete" that survey and get to a completion page that might confuse them.

**Project Title:** Canadian Election Study 2019

**Principal Investigator:** Laura Stephenson, PhD, Political Science, University of Western Ontario, (519) 661-2111x85164, [laura.stephenson@uwo.ca](mailto:laura.stephenson@uwo.ca)

**Co-Investigators:** Allison Harell, PhD, Political Science, Université de Québec à Montréal, (514) 987-3000 x5676, [harell.allison@uqam.ca](mailto:harell.allison@uqam.ca)

Peter Loewen, PhD, Political Science, Munk School of Global Affairs, University of Toronto, (416) 978-5120, [peter.loewen@utoronto.ca](mailto:peter.loewen@utoronto.ca)

Daniel Rubenson, PhD, Politics and Public Administration, Ryerson University, (416) 979-5000 x 4052, [rubenson@ryerson.ca](mailto:rubenson@ryerson.ca)

**Funding:** This project is funded by the Social Sciences and Humanities Research Council of Canada.

The purpose of this screen is to provide you with information about the research study you are being invited to participate in. You must be 18 years of age or older and a legal resident of Canada to be eligible to participate. You are being contacted because you completed a previous survey in this project.

The purpose of the study is to obtain information about your views regarding current events, elections and democracy. Your participation in this study is voluntary. You may decide not to be in this study. Even if you consent to participate you have the right to not answer individual questions or to withdraw from the study at any time. If you choose not to participate or to leave the study at any time it will have no effect on you. If you decide to withdraw from the study, you may do so at any time by exiting the survey window. Due to the anonymous nature of your data, once your survey responses have been submitted, the researchers will be unable to withdraw your data.

Your survey responses will be collected anonymously through a secure online survey platform called Qualtrics. Qualtrics uses encryption technology and restricted access authorizations to protect all data collected. In addition, Western's Qualtrics server is in Ireland, where privacy standards are maintained under the European Union safe harbor framework. The data will then be exported from Qualtrics and securely stored on Western University's server.

The survey you are being asked to complete today will take about 20 minutes to complete. Should you complete today's survey, you may be re-contacted and asked to participate in additional surveys as well. Participation today does not commit you to complete any additional surveys.

The benefit of participating in our study is that your responses will help us to know more about democracy in Canada. You may not benefit personally from your participation. There are no known risks or discomforts associated with participating in this study.

We do not offer any compensation for your participation, however if you are eligible to participate and submit the survey then you may be eligible for compensation from Qualtrics, as determined by their current policies.

Your confidentiality will be maintained at all times. Representatives of Western University's Non-Medical Research Ethics Board may require access to your study-related records to monitor the conduct of the research. The data will be stored on a secure server at Western University and will be retained for a minimum of 7 years. Your data may be archived and retained indefinitely and could be used for future research purposes (e.g., to answer a new research question). By consenting to participate in this study, you are agreeing that your data can be used beyond the purposes of this present study by either the current or other researchers.

All identifiable information will be deleted from the dataset collected so that individual participants' anonymity will be protected. The de-identified data will be accessible by the study investigators as well as the broader scientific community. More specifically, the data will be made publicly available so that data may be inspected and analyzed by others. The data that will be shared in the dataset will not contain any information that can identify you.

You do not waive any legal right by participating in this study.

If you have questions at any time about the study or its results, you may contact:

If you have any questions about your rights as a research participant or the conduct of this study, you may contact The Office of Human Research Ethics (519) 661-3036, 1-844-720-9816, email: [ethics@uwo.ca](mailto:ethics@uwo.ca). This office oversees the ethical conduct of research studies and is not part of the study team. Everything that you discuss will be kept confidential.

Completion of the survey indicates your consent to participate.

**Financement:** Ce projet a été financé par le Conseil de recherche en sciences sociales.

L'objectif de cette page est de vous fournir de l'information concernant l'étude pour laquelle vous êtes invité à participer. Vous devez avoir 18 ans ou plus et être un résident légal au Canada pour être éligible à participer. Vous avez été invité à participer à la présente étude parce que vous avez déjà participé à un autre sondage dans le cadre de ce projet.

Le but de cette étude est d'obtenir de l'information sur vos points de vue concernant l'actualité, les élections et la démocratie au Canada. Votre participation à cette étude est volontaire, donc vous pouvez décider de ne pas y participer. Même si vous décidez de participer, vous avez le droit de ne pas répondre à certaines questions ou de vous retirer de l'étude en tout temps. Si vous n'y participez pas ou décidez de vous y retirer, cette décision n'aura aucune conséquence pour vous. Si vous décidez de vous retirer, vous pouvez le faire en tout temps simplement en fermant la page. En raison de la nature anonyme de vos données, une fois que vos réponses au sondage auront été soumises, les chercheurs ne pourront pas retirer vos données.

Vos réponses seront recueillies de manière anonyme via une plateforme d'enquête en ligne sécurisée. Cette plateforme, Qualtrics, utilise une technologie de cryptage et des accès restreints par autorisation pour protéger les données. De plus, le serveur Western de Qualtrics se retrouve en Irlande, un pays où les standards pour la protection de la vie privée sont établis sous le bouclier de l'Union européenne. Les données seront ensuite exportées de Qualtrics et stockées de manière sécurisée sur le serveur de Western University.

Ce sondage devrait prendre environ 20 minutes à compléter. Si vous participez aujourd'hui, il est possible que vous soyez recontacté à une date ultérieure et invité à remplir d'autres sondages. Votre participation aujourd'hui ne vous engage pas à compléter les autres sondages.

L'avantage de participer à la présente étude est que vos réponses nous aideront à mieux comprendre la démocratie au Canada. Vous ne pouvez pas bénéficier personnellement de votre participation. Il n'y a pas de risques ou d'inconforts liés à votre participation à cette étude.

Nous n'offrons aucune compensation pour votre participation aujourd'hui. Cependant, si vous êtes éligible à participer et à soumettre le sondage, vous pourriez être éligible à une indemnisation de la part de Qualtrics, tel que déterminé par leurs politiques en vigueur.

Votre confidentialité sera maintenue en tout temps. Les représentants du comité d'éthique de la recherche non médicale de Western University peuvent avoir besoin d'accéder à vos dossiers en lien avec l'étude afin de suivre la conduite de la recherche. Les données seront stockées sur

un serveur sécurisé de Western University et seront conservées pendant au moins 7 ans. Vos données peuvent être archivées et conservées indéfiniment et peuvent être utilisées à des fins de recherche future (par exemple, pour répondre à une nouvelle question de recherche). En consentant à participer à cette étude, vous acceptez que vos données puissent être utilisées au-delà des objectifs de la présente étude par le chercheur actuel ou par d'autres chercheurs.

Toutes les informations identifiables seront supprimées de l'ensemble de données collectées afin que l'anonymat des participants individuels soit protégé. Les données anonymisées seront accessibles aux chercheurs de l'étude ainsi qu'à la communauté scientifique. De manière plus spécifique, les données seront rendues publiques afin qu'elles puissent être examinées et analysées par d'autres. Les données qui seront partagées dans le jeu de données ne contiendront aucune information permettant de vous identifier.

Vous ne renoncez à aucun droit légal en participant à cette étude.

Si vous avez des questions portant sur l'étude ou ses résultats, vous pouvez contacter, en tout temps:

Dre Laura Stephenson  
Département de science politique  
University of Western Ontario London, Ontario, Canada  
1-519-661-2111 ext. 85164  
[Laura.stephenson@uwo.ca](mailto:Laura.stephenson@uwo.ca)

Si vous avez des questions sur vos droits en tant que participant à la recherche ou sur la conduite de cette étude, vous pouvez contacter le Bureau de l'éthique de la recherche humaine au (519) 661-3036, 1-844-720-9816, ou par courriel: [ethics@uwo.ca](mailto:ethics@uwo.ca). Ce bureau supervise la conduite éthique d'études en recherche et ne fait pas partie de l'équipe de recherche. Tout ce dont vous discutez restera confidentiel.

En répondant à l'enquête, vous indiquez votre consentement à participer.

Si vous souhaitez participer à cette phase de l'étude, veuillez fermer cette fenêtre et indiquer votre consentement à remplir le sondage.

### 9.3.4 Voting: reasons and method

NOTE: There was a question type experiment for reasons for not voting. `notvote_split` was randomly set to either "categorical" or "textbox". If `notvote_split` was "categorical" (and the respondent did not vote), the respondent received the question `pes19_notvotereason1`, which was a categorical question listing potential reasons why they did not vote and asking them to select the main reason. If `notvote_split` was "textbox" (and the respondent did not vote), the respondent received the question `pes19_notvotereason2`, which provided a text box for the respondent to write in the main reason why they did not vote.

### 9.3.31 Voluntary associations

NOTE: pes19\_volassoc was set to receive a split sample of 50% (1/2), to make room in the survey for more questions. Whether a respondent was assigned to receive pes19\_volassoc was randomly determined in the Survey Flow by setting the embedded data field split\_vol\_assoc to either 0 or 1. If split\_vol\_assoc was equal to 1, they were assigned to receive pes19\_volassoc. split\_vol\_assoc can be used to filter the dataset to only respondents that were assigned to receive pes19\_volassoc.

### 9.3.43 Abortion

NOTE: The questions on abortion were set to receive a split sample of 50% (1/2), to make room in the survey for more questions. Because there were 6 alternate versions of the abortion questions, of which allocated respondents received one, this results in 1/12 of the PES sample receiving a given version of the abortion questions. Whether a respondent was assigned to receive one of the abortion questions was randomly determined in the Survey Flow by setting the embedded data field `split_abortion` to either 0 or 1. If `split_abortion` was equal to 1, they were assigned to receive QNAME. `split_abortion` can be used to filter the dataset to only respondents that were assigned to receive one of the abortion questions.

### 9.3.52 Sexism

NOTE: The questions on sexism: pes19\_hostile1, pes19\_hostile2, pes19\_hostile3, pes19\_benevolent1, pes19\_benevolent2, and pes19\_benevolent3, were set to receive a split sample of 50% (1/2), to make room in the survey for more questions. Whether a respondent was assigned to receive the sexism questions was randomly determined in the Survey Flow by setting the embedded data field split\_sexism to either 0 or 1. If split\_sexism was equal to 1, they were assigned to receive the sexism questions. split\_sexism can be used to filter the dataset to only respondents that were assigned to receive the sexism questions.

The order of the six sexism questions was fully randomized.

### 9.3.63 Health follow-ups

NOTE: pes19\_phealth and pes19\_mhealth were set to receive a split sample of 50% (1/2), to make room in the survey for more questions. Whether a respondent was assigned to receive pes19\_phealth and pes19\_mhealth was randomly determined in the Survey Flow by setting the embedded data field split\_health\_followups to either 0 or 1. If split\_health\_followups was equal to 1, they were assigned to receive pes19\_phealth and pes19\_mhealth. split\_health\_followups can be used to filter the dataset to only respondents that were assigned to receive pes19\_phealth and pes19\_mhealth.

Also note that the order of pes19\_phealth and pes19\_mhealth was randomized.
